

# Indium for Sacrificial Anodes

Indium Corporation is a premier supplier of indium materials for sacrificial anodes. Indium metal is a crucial part of today's corrosion resistance systems, used to increase efficiency over the life of the product.

## Custom Solutions

Sacrificial anodes are designed for the unique needs of customers. Likewise, the materials that go into those products should be designed for the process of anode production. Indium Corporation materials for sacrificial anodes are available in various forms, purities, and with custom dopants. Material quality is maintained through our capability to analyze and control impurities to the part per billion levels.

## Forms

- **Ingots** – for large bulk indium addition (up to 9 kilograms each)
- **Shot** – easy to handle, good for additions of grams of indium
- **Custom** – special forms for automated equipment. Wire, preforms, powder, and many other forms are available.

## Technical and Customer Support

Indium Corporation sets the industry standard in providing online and on-site technical support to our customers, worldwide. Our team of research scientists, application engineers, and technical support engineers work closely with customers to develop custom solutions to their technical problems and increase their productivity.

## Material Safety Data Sheet
